

End-to-end traceability path

Any node is reachable from any other via recorded cross-references — the operational meaning of RM10.

Connective mechanism (B3 Linkage Discipline)

every commit names its issue · every PR uses "Closes #" · every issue names its RQ and milestone

the issue / PR timeline records each reference · autogenerated release notes inherit the PR → issue chain

Manual and only as complete as contributors' referencing discipline; no lineage query; stops at data/computation without deliberate upstream linking (RM2, RM5).
