

End-to-end traceability path

Any node is reachable from any other via recorded cross-references — the operational meaning of RM10.

Connective mechanism — B3 Linkage Discipline (mandatory)

every commit names its issue · every pull request uses "Closes #" · every issue names its RQ and milestone
the issue / pull-request timeline records each reference · autogenerated release notes inherit the PR → issue chain

Manual, and only as complete as contributors' referencing discipline; no lineage query; coverage tends to stop at data and computation unless the upstream links to questions (RM2) and decisions (RM5) are made deliberately.
